

PF5600 Height Restriction Barriers

The PF5600 height Restriction Barrier is constructed from high quality steel rectangular box section and provides an ideal solution for the prevention of access for high vehicles to unauthorised areas such as staff car parks or underground low-level car parks.

Clear signage allows vehicle occupants the opportunity to determine whether they have sufficient clearances to proceed under the Height Restriction Barrier in order to access their intended destination.

Major variants include single or double opening configurations or a static non-opening option. Heavy duty options are also available for wider openings.

The opening variants can be locked in either the open or closed position via an additional latch post or a padlock respectively.

The PF5600 may also be installed in combination with the PF5700 Swinging Gate (see separate product description). These combinations include both the single and double span options.

PF5600 Single Opening Height Restriction Barrier

SPECIFICATION

Major Versions :

Single or double span
