

# PF5700 Swinging Gates

The PF5700 Swinging Access Gate provides an ideal low cost solution to a wide variety of parking, road access and traffic management requirements for locations or situations where a fully automated barrier or gate entry system is either not a necessity or not cost effective.

Constructed from high quality steel hollow box section, the robust structure of the PF5700 means it is ideally employed in unmanned areas or in areas where there is a requirement for low volume traffic control.

This durable, hard working access gate can be locked in either the open or closed position via an additional latch post or a padlock respectively. providing excellent security to any specified area when required.

A double gate option is available for wider openings which can either be latched together (providing a large open entrance when gates are open) or to a single centre post (providing two separate entrances).

The PF5700 may also be installed in combination with the PF5600 Height Restriction Barrier (see separate product description). Variants include static or opening height restriction barrier configurations and are applicable to both the single and double gate options.

**PF5700 Single Swinging Access Gate**

## **SPECIFICATION**
